Victoria Pumps Ltd	Survey for 27 Productive boreholes in Umutare Province in Rwanda. The area surveyed consisted of basement rock formations with granite and schists as the predominant rock formation. The survey was carried out in 2 phases consisting of a preliminary survey of the locations to identify the GPS coordinates. Based on the coordinates a desk study of Airphotos and Topographical maps was undertaken in order to plan for the aproximate survey lines. The second phase was the geophysical survey using Geoelectrical line profiling and soundings in combination with VLF measurements where good VLF signals was present.
